

ABSTRACT

This paper discusses the importance of Material Flow Analysis and the various management methods used in different economies. In this paper I tried to analyze the material flow analysis of desktops and laptops which gave an understanding of the scenario of laptop and desktop consumption and disposal which helps in getting the sheer amount of E-waste produced in India. This paper tries to understand the Indian scenario of E-waste and compare it with the scenarios of the developed economies and the loop holes of the laws on E-waste.
