

Abstract

Energy efficiency is not only problem of technology it also has a significant role in economic growth. To fulfill Current growing energy demand Energy efficiency is an important demand side management program. The study has a look into fundamental concepts of economics of energy efficiency with special reference to India. The study analyze the performance of energy efficiency at a state level and try to explain the country's trend with India's investment and various programs on energy efficiency. Finally the pricing behavior of the energy efficiency is analyzed using pooled data econometric analysis. The results of study concludes that there significant negative correlation between energy and the agricultural price of energy relatively no significance with industrial price of energy.
